

Noah Burnette

I make software for the manufacturing industry

About

- 📍 Asheville North Carolina
- ✉ nburnet1@duck.com
- 📞 (828)551-0543
- 🐙 nburnet1

Languages

- Python HTML/CSS
- TypeScript SQL Go
- Java

Frameworks/Libraries

- Flask FastAPI React
- htmx Gin Node.js

Platforms/Tools

- Git Ignition Docker
- Kubernetes MSSQL
- PostgreSQL

Architectures/Practices

- UNS DDD TDD EDA
- MSA CI/CD

Summary

I am a software engineer who helps digitally transform manufacturing around the world.

Experience

Industrial Software Engineer
Intellic Integration

12/2023 - Present

- Led development of large-scale, distributed industrial applications using Ignition and Unified Namespace (UNS) architecture.
- Applied domain-driven design (DDD) principles to model complex operational and business workflows.
- Designed and implemented core developer infrastructure, including a custom debugging library, lightweight ORM, and automated test discovery library.
- Developed Python microservices to support client-specific operational requirements.
- Built internal tooling in Go and Python to accelerate deployment workflows and improve engineering efficiency.
- Designed and implemented CI/CD pipelines to automate deployments and reduce regression risk.
- Mentored junior engineers through code reviews and architectural discussions, increasing code quality and engineering standards.
- Authored comprehensive technical documentation to support stakeholder adoption and long-term system maintainability.
- Delivered solutions across multiple industrial sectors, including food & beverage and battery manufacturing.

Software Developer Intern
Sierra Nevada Brewing Co.

04/2023 - 11/2023

- Developed warehouse and quality-related systems using Ignition.
- Wrote and optimized SQL stored procedures and views for inventory and laboratory reporting.
- Implemented backend functionality in Python to for data processing and enforcement.
- Developed operator-facing interfaces to streamline data entry processes.

Network Technician
Microtech Knives

12/2021 - 04/2023

- Deployed and maintained Linux-based infrastructure supporting internal systems.
- Built and maintained Docker images to standardize development and workstation environments.
- Performed network traffic analysis to identify vulnerabilities and troubleshoot connectivity issues.
- Configured and managed Meraki networking hardware, including firewalls, switches, and access points.

Open Source Projects

GoMES · <https://github.com/nburnet1/gomes>

05/2024 - Present

A real-time, event-driven framework written in Go for dynamic, concurrent data collection and processing.

- Built a namespace engine to contextualize data in a hierarchical structure.
- Implemented support for namespace governance and scoped control.
- Decoupled services using gRPC for efficient inter-service communication.
- Enabled automatic MQTT topic generation from the namespace engine.
- Integrated an htmx admin UI for configuration and monitoring.

Ignition Sift (VS Code Extension) · <https://github.com/nburnet1/ignition-sift>

12/2025 - Present

Barebones, stub-driven auto-imports for Ignition scripting projects.

- Generates Python stubs from Ignition project structure for robust autocompletion.
- Builtin generator converts Python 2 type comments into Python 3 compatible type hints for modern tooling (Pylint).
- Indexes top-level classes and functions across generated stubs for fast symbol search and import suggestions.
- Designed to be configurable and well-documented to support diverse Ignition project use cases.

Education

University of North Carolina Asheville
Bachelor of Science Computer Science

05/2020 - 12/2023
